Date of: Injury/Accident: 03/07/2025

First Examination: 04/17/2025

Name: Gil Dong Hong

D.O.B: 01/11/1977

**CURRENT SUBJECTIVE CHIEF COMPLAINTS:**

Neck pain

Headache

**CURRENT/PAST HISTORY:**

Mr. Gil Dong Hong, a 49-year-old male, initially presented to this office on 04/17/2025 for acupuncture treatment related to injuries sustained in a motor vehicle accident that occurred on 03/07/2025. The patient reported significant neck pain and persistent headaches following the accident. The patient stated that the symptoms began after the collision and have continued to interfere with daily activities and overall comfort. The patient presented with complaints primarily involving the musculoskeletal system, particularly the cervical region.

**PAST MEDICAL HISTORY:**

Serious Medical Illnesses: None reported.

Chronic Conditions: None reported.

Hospitalizations: History of hospitalization related to a severe motor vehicle accident during the COVID-19 pandemic.

Surgeries: History of kidney surgery.

Vehicular Accidents: Patient reports a history of a severe motor vehicle accident during the COVID-19 pandemic, which resulted in left-sided lower body paralysis. The patient underwent treatment for over one year and eventually recovered.

Industrial Accidents: None reported.

**ALLERGIES:**

No known allergies.

**FAMILY HISTORY:**

Family history is non-contributory.

**SOCIAL HISTORY:**

The patient does not smoke cigarettes or drink alcohol.

**REVIEW OF SYSTEMS:**

Non-contributory.

**INITIAL PHYSICAL EXAMINATION FINDINGS:****GENERAL:**

Mr. Gil Dong Hong is a well-developed, well-nourished 49-year-old male who appeared to be in moderate distress due to neck pain and headaches. He was in a sound state of mind, alert and oriented to time, place, and person, and answered questions appropriately throughout the examination.

**VITAL SIGNS:**

BLOOD PRESSURE: 115/75

PULSE: 63 TEMP: 98.1

**WESTERN EXAM FINDINGS:****CERVICAL SPINE:**

Tenderness and muscle tightness were noted in the cervical paraspinal muscles and upper trapezius region. Cervical range of motion was restricted with pain. Right rotation was limited to 45 degrees and left rotation to 60 degrees. The patient reported pain with cervical flexion and with right cervical rotation. Headaches associated with cervical tension were also reported following the motor vehicle accident.

**ORTHOPEDIC TESTS:**

Compression Test: Positive

Localized pain was elicited in the cervical region.

Distraction Test: Positive

Patient reported improvement of pain with stretching of the upper trapezius region.

**RANGE OF MOTION:****CERVICAL SPINE:**

Flexion: Within functional limits with pain.

Extension: Within functional limits with pain.

L. Rotation: 60/80 with pain.

R. Rotation: 45/80 with pain.

Pain was noted with cervical flexion and right cervical rotation.

**LUMBAR SPINE:**

Lumbar spine examination revealed no significant tenderness or muscle spasm. Range of motion was within functional limits. The patient did not report significant low back pain at the time of examination.

**ORTHOPEDIC EXAMS:**

Lumbar straight leg raise test was negative bilaterally. No significant neurological deficits were noted in the lower extremities.

**THORACIC SPINE:**

Thoracic spine examination revealed no significant tenderness to palpation. Range of motion appeared within functional limits.

**SHOULDERS:**

Examination of the shoulders revealed mild stiffness without significant tenderness or muscle spasm. Range of motion was grossly within functional limits bilaterally.

**WESTERN DIAGNOSIS:**

Cervical sprain/strain secondary to motor vehicle accident

Cervicalgia

Post-traumatic headache

Cervical myofascial pain syndrome

**EASTERN EXAM FINDINGS:**

Tongue Signs

Body: Pink

Coating: White, Thin, Swollen

Pulse Signs

Right: Wiry

Left: Wiry

### **EASTERN DIAGNOSIS:**

Eight principles: yin, exterior, cold, excess.

Zang-fu dysfunction: Stagnation of the liver qi and Trauma.

Qi dysfunction: Stagnation

Blood Dysfunction; Stagnation

Five Elements: damp, wind

### **TREATMENT COURSE:**

Having related the clinical findings to Mr. Gil Dong Hong, a course of treatment was discussed. A regimen of acupuncture therapy was prescribed. Treatments including acupuncture, electro-acupuncture, and hot/cold pack therapy were administered to the affected areas in order to improve circulation, reduce muscle tension and pain, decrease spasm, promote healing, and improve range of motion associated with the injuries sustained in the motor vehicle accident. Treatment was focused primarily on the cervical region and associated headache symptoms. Appropriate draping procedures were maintained during treatment.

### **DISCUSSION:**

The patient was treated in this office for injuries related to the motor vehicle accident. As a result of treatment, the patient reported improvement in neck pain, headaches, and cervical mobility. The patient responded positively to acupuncture treatment and demonstrated gradual functional improvement throughout the course of care.

The patient may require supportive or periodic treatment in the future should symptoms recur or worsen with daily activities or physical stress.

### **PHYSICAL LIMITATIONS:**

The patient should perform only activities within the limits of his comfort. Strenuous activities, heavy lifting, and excessive cervical strain should be avoided until symptoms have stabilized further.

**FUTURE MEDICAL CARE:**

Additional medical care may be necessary in the future if the patient experiences exacerbation or recurrence of symptoms related to the motor vehicle accident injuries. Future flare-ups may result in temporary functional limitations and additional medical expenses.

Overall, the patient's prognosis appears fair to good based on the progress achieved with conservative treatment to date.

Should further assistance or information regarding this patient be required, please feel free to contact this office at any time.

Respectfully yours,

Dr. SA EUN SONG, L.Ac., DACM, CMT. \_\_\_\_\_
